# Mars

**“Bring out  
the  
adventurer in  
you!”**

## Welcome to Mars!

Come to the fourth planet from the sun and enjoy an outdoor experience that you will never forget. With seasons similar to the Earth, however twice as long, be prepared for a winter wonderland. With highs reaching a toasty 20°C and lows of -87°C enjoy a average temperature of -63° If you love the outdoors, Mars is the place for you. Olympus Mons can satisfy your climbing itch and Valles Marineris can quench your sight seeing thirst. There are seven caves for you to explore and surprise dust storms will get your adrenaline pumping. Enjoy the two breathtaking, odd shaped moons that orbit Mars at all hours. On top of all those wonderful features, you and your family can also experience instant weight loss because of Mars' lesser gravitational pull (.377 of the Earth's).

### Olympus Mons & Valles Marineris

#### Olympus Mons

Olympus Mons is the highest know mountain in the solar system. It is a shield volcano that reaches 27km in elevation. That's three times the height of Mt. Everest! If you can't get your thrills from this climb then you need to leave the galaxy! We provide you with all of the equipment you will need to keep you secure to the mountain. All you will need to bring is your inner Edmund Hilary!

#### Valles Marineris

Do you think that the Grand Canyon is huge? Well, think again because the Valles Marineris is the largest canyon in the solar system stretching an astonishing 4,000km long and seven kilometers deep. Compared to the measly Grand Canyon which is only 446km long and two kilometers deep.

#### Other Features

Other things to look out for while visiting Mars include: the Borealis Basin which covers 40% of the planet, frozen, and if you're lucky, running water!

### Join the B.Y.O.S. Club!

The surface of Mars is made primarily of iron oxide, which gives Mars its beautiful red color, but unfortunately this is also detrimental to plant life. So the Bring Your Own Soil Club (B.Y.O.S.) invites you to be one of the first to create life on Mars! If you bring one pound of soil with you on your journey, you will be given access to our exclusive greenhouse. This greenhouse allows the natural atmosphere, which consists of 95.32% carbon dioxide, to flow into the building and give plants life!

If you participate in this exciting endeavor , you will be awarded with a customized plaque that includes your name and the event date, as well as having your name on a plaque that will be hung inside the greenhouse.
